Xinjia Zhao

Research Assistant Professor · Dalian Institute of Chemical Physics, Chinese Academy of Sciences
zhaoxinjia@dicp.ac.cn · ORCID 0000-0001-5101-7273 · Google Scholar · zhaoxinjia.github.io

RESEARCH INTERESTS

Nanopore single-molecule sensing and bioanalysis. Proposed the PIToN model for engineering aerolysin pores, achieving sub-dalton single-molecule discrimination of protein citrullination; developed new assays for neutral glycans, sialic-acid linkage isomers, and cisplatin–DNA adducts. Actively controlled, repeatedly readable single-molecule platforms (molecular ping-pong). Mechanisms resolved by molecular dynamics combined with finite-element simulation, linking pore chemistry to ionic-current signatures.

EDUCATION

2015 – 2021 Ph.D., Condensed Matter Physics — Institute of Physics, CAS (advisor: Prof. Xinghua Lu)
2011 – 2015 B.S., Physics — Jilin University

APPOINTMENTS

2023 – present Research Assistant Professor — Dalian Institute of Chemical Physics, CAS (group of Prof. Guangyan Qing)
2021 – 2023 Postdoctoral Researcher — Institute of Physics, CAS (advisor: Prof. Xinghua Lu)

HONORS AND AWARDS

- **2025** First Prize, Science and Technology Award of the China Association for Instrumental Analysis (CAIA)
- **2024** Liaoning "Xingliao Yingcai" Postdoctoral Reserve Program
- **2023** High-level Talent (Young Talents) Program, DICP

RESEARCH FUNDING

- **2024 – 2025** Principal Investigator, DICP–First Affiliated Hospital of Dalian Medical University Joint Fund (DMU-1&DICP UN202307): polymer-modified porous titanium alloy scaffolds for large segmental bone defect repair (¥500,000)
- **2018 – 2020** Participant, NSFC Major Research Plan (91753136): nanopore detection of dynamic modifications of biomacromolecules (¥700,000)
- **2016 – 2019** Participant, NSFC General Program (31571012): nanopore sequencing with DNA self-assembly labels (¥660,000)

PATENTS (GRANTED)

[1] Mold and method for fabricating an insulating base, and use of the base in molecular detection. Patent No. ZL201811088465.1. Inventors: Xinjia Zhao, Xinyan Shan, Xinghua Lu.

[2] Force-spectroscopy analysis method and apparatus based on nanopore sequencing. Patent No. ZL202110598008.2. Inventors: Xinjia Zhao, Xiaoyu Chen, Zhuang Mi, Xinyan Shan, Xinghua Lu.

[3] Apparatus and method for controlling the motion of biomolecules in a nanopore. Patent No. ZL201911053046.9. Inventors: Xiaoyu Chen, Xinjia Zhao, Zhuang Mi, Yaru He, Xinyan Shan, Xinghua Lu.

PATENT APPLICATIONS

[4] Nanopore microfluidic chamber and its applications. Application No. CN202010947474.2. Inventors: Xiaoyu Chen, Xinjia Zhao, Zhuang Mi, Xinyan Shan, Xinghua Lu.

[5] Device and method for high-throughput screening of biomolecules. Application No. CN202010946762.6. Inventors: Xiaoyu Chen, Xinjia Zhao, Zhuang Mi, Xinyan Shan, Xinghua Lu.

PROFESSIONAL SERVICE AND MEMBERSHIPS

- **2026 – present** Full Member, Sigma Xi, The Scientific Research Honor Society (elected by nomination)
- **2024 – present** Committee member, Cardiovascular Disease Medical-Engineering Integration Committee, Liaoning Society for Cell Biology

TECHNICAL SKILLS

Solid-state nanopore fabrication and low-current ionic recording; molecular ping-pong control and FPGA-driven instrumentation; molecular dynamics and finite-element simulation of pore–molecule interactions; scientific data analysis.
